

Land Line Dialler

Providing a Reliable Automated Telephone Assistance Call System

Remote Activation

6 Number Calling

Voice Message Identity

Intelligent Call Unit

Licence Exempt

Mains Option Available

The equipment is simply programmed, from the front panel, with your selected telephone numbers and a choice of two pre-programmed short voice messages. A remote key fob turns the dialler on and off and also incorporates a panic button. When activated by an accessory, such as a passive infrared motion detector, the dialler automatically begins calling the programmed numbers in order.

The unit will try each number 3 times. When answered it plays the recorded message, that is then cancelled by the recipient pressing 9 on the telephone keypad. If a machine or message bank answers the unit, no acknowledgement can be made, and the unit calls the next number in the memory. When the call has been acknowledged the dialler reverts to standby mode.

There are also 2 monitoring station numbers available, for those who have this option.

The dialler can be supplied with a moulded plug wall transformer for normal 220/240-volt, and battery back up. Activation range of the accessories to the dialler is about 50 metres, depending on local topography. The dialler can be added to existing alarm systems by a competent installer. The unit is ideal for those who want a cost-effective system that is easy to install and maintain.

Businesses find this a useful tool especially for lone workers. The dialler can be modified to respond to a "Man Down" unit that incorporates a tilt switch to automatically activate the transmitter when the unit has been in a prone position for a predetermined time.

There are also press buttons and a ring pull on the unit, giving three security options for the "Man Down" to be utilised effectively.

All equipment conforms to the UK licensing requirements & CE regulations.
