

# GA REMOTE OPERATED SIREN ALERT

## GIVING CONFIDENCE TO LONE WORKERS BY SUMMONSING HELP FROM THEIR IMMEDIATE LOCATION

There are two parts to the system:

- a) The remote siren unit.
- b) A battery operated keyfob transmitter

Siren Unit  
Ref: F103  
28cmL x 22cmW x 9cm D

The Siren has a **130 decibel output**, loud enough to be heard in the noisiest environments and a flashing light to attract attention. Installation is simply four screws. The unit is powered by a large rechargeable battery which is charged via a wall transformer plugged into 220/240 volt mains supply.

When a button is depressed on the keyfob, the siren unit is activated sounding the alarm and activating the flashing light.

Keyfob Transmitter Ref: J33A  
Personal Panic Alarm  
6cm L x 3.5cm W x 1cm D

Pressing the button a second time cancels the siren. Firms

using industrial machinery now have a device that leave employees hands free to do their job but can access equipment to call for help remotely in an emergency, over a 50 metre range. The siren has battery back up and the keyfob transmitter runs off a small 12 volt dry battery.

Man down alert  
Ref: J27Z Dimensions  
12 cm L x 5.2cm W x 3.6 cm D

Other accessories to activate the siren can include wireless door transmitters, to secure remote emergency exits or rooms with limited access. The system can also be adapted to react to "Man down" transmitters these are especially useful for lone workers to alert others of accidents. Also incorporated is an in-built tilt switch that will activate when the unit has been in a prone position for a predetermined time, after sounding audible warning beeps, so the call can be cancelled by the wearer if desired. The units have a range to the siren up to 50 metres.

Wireless Door Contact Transmitter  
7.2cm L x 3.3 cm W x 1.4 cm D

All the equipment conforms to the UK licensing requirements & CE regulations.
