

doorSentry

Wireless Door Alarm System

To notify you and your staff when a door has been opened.
Helping you to meet your employer Health and Safety obligations for your staff.

Battery Operated

Licence Exempt

Up to 250 metre Range

Pocket 'Pager'

Text Message Identity

No Contract Needed

Licence Exempt

This system will give you the confidence that security personnel can respond quickly when a door with this system is opened.

When the door contacts are separated, by the door opening, the transmitter sends a pre-set location code or text identity message to the pocket "pager" up to 250 metres away, subject to local topography.

The "pager" will respond by beeping or vibrating, alerting you that the door alarm has been activated while displaying the identity number or location of the alarm unit activated.

The system is constructed within a plastic ABS box, that is designed to be located on a flat surface using appropriate screws. Six AA Type batteries power the unit and these are located internally.

To achieve maximum range, the aerial on the top must be free from any metal object that will reduce the range to the pagers.

You can have numerous dedicated "pagers" to react to the same alert, so many people can respond to a signal.

Additional equipment such as passive infrared motion detectors, (PIRs), can be added to the system at a later date to expand on the safety and security of your site.

All equipment conforms to the UK licensing requirements & CE regulations.
