

M.R. Assistance Call-to-Pager (Battery Operated)

FOR BOTH PUBLIC AND STAFF TO SUMMON AID

- LICENCE EXEMPT
- UP TO 250M RANGE
- BATTERY OPERATED
- TEXT MESSAGE IDENTITY
- "POCKET PAGER" TO VIBRATE OR BLEEP
- NO CONTRACT NEEDED

Ref: F61X Box size + Aerial (14 cm)
16.5cm L x 12.5cm W x 7.5 cm D

Pager Ref: J26
6cm L x 4cm W x 2 cm D

The two parts are simply:

THE ASSISTANCE CALL UNIT
THE "PAGER".

The 'call unit' is located in the area where the public are most likely to require help and advice, such as an information desk, product display areas, first aid stations and toilets.

A simple message on the front of the 'call unit' asking the public to "Press button to call for an assistant," will enable employees to continue working in other areas until required. The range is dependant on topography.

Pressing the button activates the call transmitter, sending the unit's identity code to all the pocket "pagers" in the location (or just to a single designated pager, depending on how you want the system to work). The "pagers" will bleep or vibrate, displaying the activated "Call unit" identity, so the assistant reading the code displayed on the "pager", will know which unit has been operated and respond accordingly. A buzzer can be incorporated to let the user know action has been taken.

An external waterproof version is available also.

All the equipment conforms to the licence exempt requirements and CE regulations. **No pager contract is required.**
