

# niteSentry

## Wireless Fire Alarm System

For the deaf and hard of hearing,  
when sleeping at night  
to help you meet your DDA obligations.

**Easily Added to Existing  
deafSentry**

**Vibrating Pager sets  
Off Vibrating Pillow  
Pad**

**Can be used as an  
Alarm Clock**

The pager is docked in the nite**Sentry** cradle, before going to bed and the pillow pad placed under the pillow.

When an alarm is received by the pager, the vibration is detected in the docking cradle, which in turn causes the pillow pad to vibrate, & a light to flash intermittently, thereby alerting the sleeping person.

This equipment broadens the effectiveness of an existing deaf**Sentry** system, allowing hotels, college halls of residence and other providers of accommodation to alert their guests both during the day within and around the building and at night.

The unit consists of the docking cradle, with integrated light, and the pillow pad, and a plug in mains transformer. It must be used in conjunction with the host deaf**Sentry** system.

By using the alarm clock function on the pager, the alarm can be set to vibrate at a pre-determined time.
